Digital Approval System

Abstract:

In today's running technology every job has become effortless, keeping this in mind a system has been designed which is helpful for colleges, universities and other educational institutions. The system operates through an online interface that allows users to generate, issue, track, request and manage out-passes digitally, eliminating the need for traditionally paper-based methods. There are many systems which are being used for this purpose, but they work in native nature. To avoid the demerits of existing system this system is designed to intelligently serve numerous users at an instant. It is purely network based miniature. A high level security is used to avoid anonymous entry to system, and to avoid worthless tapping of data.
